Poster Title

A descriptive subtitle for your work

First Author[†], *Second Author*[‡], *Third Author*[†*]

[†]University of Cagliari, [‡]Second Institution, [*]Third Institution, Country.

Introduction

Write a short motivation of the problem here. State the gap in the literature and what this work contributes. Cite related work like this [1].

1. **Contribution one**: one-line description.
2. **Contribution two**: one-line description.
3. **Contribution three**: one-line description.

Method

Describe the problem formulation. Equations are rendered as usual:

$$x^\star \in \underset{x \in \mathcal{X}}{\operatorname{argmin}} \; \mathcal{L}(x, y) \quad \text{s.t.} \quad \|x - x_0\|_p \leq \varepsilon. \tag{1}$$

Refer to it as eq. (1).

Step 1. Short description of the first step.

$$\theta^{(k+1)} = \theta^{(k)} - \alpha \nabla_\theta \mathcal{L}(\theta^{(k)}) \tag{S1}$$

Step 2. Short description of the second step.

Experimental Setup

Datasets: list the datasets used.
Models: list the models used.
Metrics: define the evaluation metrics.

Scenarios: describe the evaluation scenarios or baselines.

Code

Show how to use your library or tool:

```python
import torch

# Short, readable usage example
def my_function(inputs: Tensor) -> Tensor: ...

results = my_function(torch.zeros(10))
```

Results

Summarise the main experimental findings here.

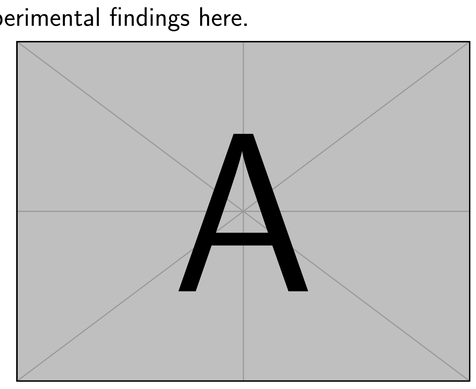

Figure a. Caption of the first figure.

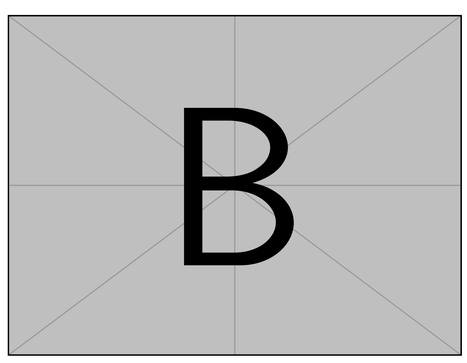

Figure b. Caption of the second figure.

Conclusion

Wrap up the key takeaways: (i) first finding; (ii) second finding; (iii) third finding. Mention future work.
